CRC Materials Science and Engineering Handbook provides a convenient, single-volume source for physical and chemical property data on a wide range of engineering materials. As with the first three editions, this **Fourth Edition** contains information verified by major professional associations such as ASM International and the American Ceramic Society (ACerS). Patterned after the iconic *CRC Handbook of Chemistry and Physics*, this edition also:

- Offers a more streamlined presentation organized by categories of traditional and advanced materials
- Converts chemical and physical property data from US customary units to SI units, improving the handbook's usefulness on a global scale
- Expands coverage to include the latest material property data on low-dimensional carbons, two-dimensional (2D) nanomaterials, MAX phases, and amorphous metals

Featuring extensive references to contemporary research literature, **CRC Materials Science and Engineering Handbook, Fourth Edition** is an ideal starting point for scientists and engineers making, selecting, or evaluating materials.
