Lecture Notes in Algebraic Topology (Graduate Studies in Mathematics, 35) Paul Kirk James F. Davis

The amount of algebraic topology a graduate student specializing in topology must learn can be intimidating. Moreover, by their second year of graduate studies, students must make the transition from understanding simple proofs line-by-line to understanding the overall structure of proofs of difficult theorems. To help students make this transition, the material in this book is presented in an increasingly sophisticated manner. It is intended to bridge the gap between algebraic and geometric topology, both by providing the algebraic tools that a geometric topologist needs and by concentrating on those areas of algebraic topology that are geometrically motivated. Prerequisites for using this book include basic set-theoretic topology, the definition of CW-complexes, some knowledge of the fundamental group/covering space theory, and the construction of singular homology. Most of this material is briefly reviewed at the beginning of the book. The topics discussed by the authors include typical material for first- and second-year graduate courses. The core of the exposition consists of chapters on homotopy groups and on spectral sequences. There is also material that would interest students of geometric topology (homology with local coefficients and obstruction theory) and algebraic topology (spectra and generalized homology), as well as preparation for more advanced topics such as algebraic K -theory and the s -cobordism theorem. A unique feature of the book is the inclusion, at the end of each chapter, of several projects that require students to present proofs of substantial theorems and to write notes accompanying their explanations. Working on these projects allows students to grapple with the "big picture", teaches them how to give mathematical lectures, and prepares them for participating in research seminars. The book is designed as a textbook for graduate students studying algebraic and geometric topology and homotopy theory. It will also be useful for students from other fields such as differential geometry, algebraic geometry, and homological algebra. The exposition in the text is clear; special cases are presented over complex general statements.

From reader reviews:

Rene Moore:

Now a day folks who Living in the era where everything reachable by interact with the internet and the resources inside can be true or not demand people to be aware of each info they get. How individuals to be smart in having any information nowadays? Of course the answer is reading a book. Examining a book can help men and women out of this uncertainty Information specially this Lecture Notes in Algebraic Topology (Graduate Studies in Mathematics, 35) book since this book offers you rich facts and knowledge. Of course the details in this book hundred per cent guarantees there is no doubt in it as you know.

Miguel Lynch:

Reading a book tends to be new life style on this era globalization. With looking at you can get a lot of information that will give you benefit in your life. Along with book everyone in this world can certainly share their idea. Guides can also inspire a lot of people. A great deal of author can inspire their reader with their story or their experience. Not only situation that share in the books. But also they write about the ability about something that you need case in point. How to get the good score toefl, or how to teach your sons or daughters, there are many kinds of book that you can get now. The authors nowadays always try to improve their expertise in writing, they also doing some research before they write for their book. One of them is this Lecture Notes in Algebraic Topology (Graduate Studies in Mathematics, 35).

Latricia Wynkoop:

Reading can called mind hangout, why? Because while you are reading a book specially book entitled Lecture Notes in Algebraic Topology (Graduate Studies in Mathematics, 35) your brain will drift away trough every dimension, wandering in most aspect that maybe not known for but surely can be your mind friends. Imaging just about every word written in a book then become one web form conclusion and explanation that will maybe you never get just before. The Lecture Notes in Algebraic Topology (Graduate Studies in Mathematics, 35) giving you a different experience more than blown away your mind but also giving you useful details for your better life in this era. So now let us explain to you the relaxing pattern at this point is your body and mind are going to be pleased when you are finished studying it, like winning a game. Do you want to try this extraordinary investing spare time activity?

Brant Castillo:

What is your hobby? Have you heard in which question when you got learners? We believe that that problem was given by teacher to the students. Many kinds of hobby, Every individual has different hobby. So you know that little person like reading or as looking at become their hobby. You need to understand that reading is very important and book as to be the issue. Book is important thing to increase you knowledge, except your teacher or lecturer. You will find good news or update in relation to something by book. Different categories of books that can you choose to use be your object. One of them is niagra Lecture Notes in
