Intellectual Property Rights in Agricultural Biotechnology (Biotechnology in Agriculture Series)

Frederic H Erbisch, Karim M Maredia

During the past 25 years, biotechnology has revolutionized agricultural research. The enormous potential, together with a landmark decision by the US Supreme Court to allow the patenting of genetically-engineered organisms has encouraged private sector companies to invest in agricultural biotechnology research programmes. This has contributed to a rapid growth in interest in intellectual property rights as applied to this subject. The first edition of this book was published in 1998. Now fully revised and updated, it presents definitive information on intellectual property law in a simplified form (with a minimum of legal jargon). New chapters have been added which cover plant variety protection and farmers rights, as well as additional case studies.
