Polymer Surface Modification: Relevance to Adhesion, Volume 5 Kash L. Mittal

The topic of polymer surface modification is of tremendous contemporary interest because of its critical importance in many and varied technological applications where polymers are used. Currently there is brisk research activity in unraveling the mechanisms of surface modification and finding ways to prolong the life of surface treatment. Also there is acute interest and need to devise new, improved and economical means to modify polymer surfaces. This book is divided into three parts as follows: Part 1: Surface Modification Techniques; Part 2: Interfacial Aspects and Adhesion; Part 3: General Papers. The topics covered include : various techniques for surface modification including plasma (both vacuum and atmospheric pressure), ozone, photografting, UV photo-oxidation, laser, use of charged particles and others for a variety of polymers; longevity of surface treatment; hydrophobic recovery; fabrication of high-density polymer nano-dots; immobilization of organometallic catalysts on textile carrier materials; polymer membrane antifouling properties; electroless metallization of polymers; effects of surface modification on interfacial shear strength of composites, cord/rubber adhesion, adhesion of UV-curable coatings and attachment of hyperbranched polymers; plasma polymerization; block copolymers; application of plasma technology in decontamination of heat-sensitive polymer surfaces. In essence this book reflects the current state-of-the-knowledge in the arena and represents the work of many renowned scientists and technologists. It should be of interest to anyone with a desire or need to learn the latest R&D activity in this domain and the information contained here should be very valuable in deciding the optimum surface modification technique for his/her particular requirements.

From reader reviews:

Marian Perkins:

Spent a free a chance to be fun activity to accomplish! A lot of people spent their free time with their family, or their own friends. Usually they performing activity like watching television, going to beach, or picnic in the park. They actually doing same every week. Do you feel it? Do you need to something different to fill your own personal free time/ holiday? Could be reading a book might be option to fill your free of charge time/ holiday. The first thing you ask may be what kinds of e-book that you should read. If you want to consider look for book, may be the book untitled Polymer Surface Modification: Relevance to Adhesion, Volume 5 can be very good book to read. May be it can be best activity to you.

Samantha Peay:

Do you have something that that suits you such as book? The e-book lovers usually prefer to choose book like comic, brief story and the biggest one is novel. Now, why not trying Polymer Surface Modification: Relevance to Adhesion, Volume 5 that give your pleasure preference will be satisfied through reading this book. Reading routine all over the world can be said as the means for people to know world far better then how they react when it comes to the world. It can't be said constantly that reading addiction only for the geeky individual but for all of you who wants to possibly be success person. So , for all of you who want to start reading as your good habit, it is possible to pick Polymer Surface Modification: Relevance to Adhesion, Volume 5 become your personal starter.

Elizabeth Morris:

Does one one of the book lovers? If so, do you ever feeling doubt when you are in the book store? Try to pick one book that you never know the inside because don't judge book by its handle may doesn't work this is difficult job because you are afraid that the inside maybe not since fantastic as in the outside seem likes. Maybe you answer can be Polymer Surface Modification: Relevance to Adhesion, Volume 5 why because the fantastic cover that make you consider in regards to the content will not disappoint a person. The inside or content is definitely fantastic as the outside as well as cover. Your reading 6th sense will directly show you to pick up this book.

Shelley Gavin:

Many people spending their time by playing outside having friends, fun activity using family or just watching TV the whole day. You can have new activity to shell out your whole day by reading through a book. Ugh, ya think reading a book can actually hard because you have to bring the book everywhere? It ok you can have the e-book, delivering everywhere you want in your Smartphone. Like Polymer Surface Modification: Relevance to Adhesion, Volume 5 which is finding the e-book version. So , why not try out this book? Let's notice.
